Winter

Family: Rosaceae
Origin: Mediterranean origin, US breeding
Climate Zone: USDA 4-9, Sunset 1-9,14-24
Mature Height: 4-5 feet
Mature Width: 3 feet
Plant Type: Deciduous
Growth Habit: Erect canes
Growth Rate: Fast, up to 5 feet long in their first year
Flower Color/Details: White, in clusters
Flower Season: April through May, repeat July through October
Bark: Reddish brown, bristly
Fruit: Large, golden yellow, seeded berries in summer and again in fall
Foliage: Grass green five-fingered leaves, turning yellow with a red blush in late fall
Use: Edible fruit, raised bed planters, trellis
Floral: Unknown
Wildlife/Beneficials: Attracts butterflies and bees
Deer Resistant: No
Fire Resistant: No
Medicinal Uses/Edible: Edible fruit
Adverse Factors: Growth and fruiting are compromised by weeds, mulching suppresses weeds in berry beds

Soil: Adaptable, well-drained
Exposure: Morning sun, afternoon shade
Water Requirements: Moderate 1-2 inches water weekly, March to October. Not drought tolerant.
WUCOLS Water Needs: Not listed
UC Davis Arboretum All-Star: No
Description: Plants grow stiff stems, flowering and fruiting in autumn and again in spring the second year. Harvest May-June and August-October. Also referred to as 'Fallgold.'
Maintenance: Prune to control length of canes and number of buds. After June harvest, cut canes that fruited to the ground. Tie new canes to a trellis to make harvesting easy. In November cut second growth canes to 12" tall and mulch with compost or composted manure.
